IMMUNOLOGY: NEW APPROACHES TO AUTOIMMUNE DISEASES

Come explore the connections between the research and clinical perspectives and the impact on the patient.

Ever wonder how cutting-edge scientific research can lead to cures and pioneering treatments for patients? Autoimmune research breakthroughs over the last decade have made this one of the most promising areas of new discovery.

There are more than 100 autoimmune diseases; including Crohn’s disease, Psoriasis, Rheumatoid arthritis, Lupus and Type 1 diabetes, to name only a few. The American Autoimmune Related Diseases Association reports that 50 million Americans suffer from autoimmune disease.

Join us as we explore the impact of medical research on the future of human health as we host an exciting, unique speaker series: SBP Insights.

Scientists, doctors and patients come together for a panel discussion on the latest discoveries in autoimmune disease, followed by a Q&A session.

THURSDAY

JUNE 20, 2019

5:30–7:00 PM

Building 12,
Sanford Burnham Prebys Auditorium
10905 Road to the Cure
La Jolla, CA  92121

CALL  (858) 795-5431

Scientist
Carl F. Ware, Ph.D.
Director, Infectious and Inflammatory Diseases Center
Professor, Immunity and Pathogenesis Program
Director, Laboratory of Molecular Immunology
Sanford Burnham Prebys Medical Discovery Institute

Doctor
Hal Hoffman, M.D.
Professor of Pediatrics and Medicine
Chief, Division of Allergy, Immunology, and Rheumatology
UCSD and Rady Children's Hospital of San Diego
*Dr. Hoffman will cover adult and pediatric cases

Moderator
Zaheer Nahle, Ph.D., MPA
Chief Executive Officer
Arthritis National Research Foundation

Patient
Angela Durazo
Formula 4 Race Car Driver
First Female to Compete in the United States F4 Championships
Former Para-Pro Triathlete
2X Award-Winning Actress
